Caterpillar - 379

Our company has been in business for over 98 years, but if you are just getting to know Thermal Solutions Manufacturing, Inc., here are some quick facts that will get you up to speed.

- We were originally founded as G&O Manufacturing in New Haven, CT in August of 1915.
- G&O demonstrated itself early on as an industry leader by supplying radiators for Mack Bulldog military trucks in DeHaviland DH-4 airplanes in World War I.
- In 1919, a Navy seaplane outfitted with the company's radiator became the first airplane to cross the Atlantic Ocean.
- Admiral Richard E. Byrd's expedition to the South Pole in 1929 included electric generator sets with G&O radiators.
- The company continued to distinguish itself by providing 20% of all U.S. military truck radiators along with aircraft oil coolers, generator sets, air compressors, radiators and replacement parts during World War II.
- In 1970, G&O became the first in the industry to bring louvered plate to fin heavy-duty truck radiator cores, to operate a computer-controlled wind tunnel to accurately determine radiator heat transfer performance and to provide its customers with a computerized thermal performance predictor program.
- By 1975, the company was providing OE radiators for 70% of all heavy-duty trucks made in the U.S.
- The 1980s brought continued innovation with new developments in aluminum-charge air coolers with the highest thermal efficiency.
- The year 1995 brought the development of the VTD split-louver serpentine radiator core which remains the highest performance radiator core available today.
- In 2005, the company distinguished itself from other aftermarket competitors by developing a line of BTOE (better than original equipment) with demonstrated superior durability and performance.
- TSM leverages the capability of its sister company, R&D Enterprises, to design and manufacture high-quality engineered oil coolers and heat exchangers for the marine industry, automotive and truck applications, industrial usage and agricultural equipment installation.
- TSM owns 17 active U.S. and foreign patents and numerous U.S. and foreign trademarks.

Today, TSM is prepared for significant growth, and it is positioned to be the leader of the heavy-duty cooling system industry through new product introductions, continued exceptional service and high quality products.

For more information about TSM, please contact your local TSM office at 800-776-9605 or www.thermalsolutionsmfg.com.

See For Yourself How Gen Set Radiators Meet and Exceed Expectations!

Corporate Office:

www.thermalsolutionsmfg.com

Thermal Solutions Manufacturing, Inc. is proud to offer you our full line-up of Gen Set radiators and cooling systems. We have 68 models and many have been specially designed to correct issues or improve the performance of original equipment models from:

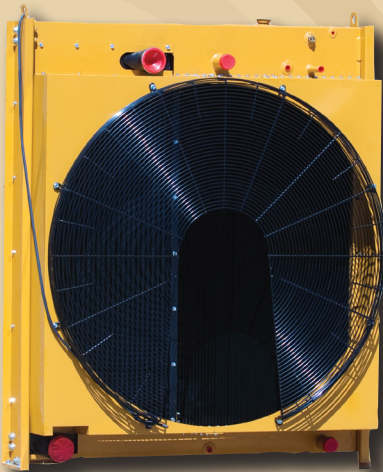

- Caterpillar
- Cummins
- Detroit Diesel
- Komatsu
- Lincoln Welder
- Waukesha
- And many others

We even have the capability to custom-produce replacement cooling systems for less common or out-of-production models.

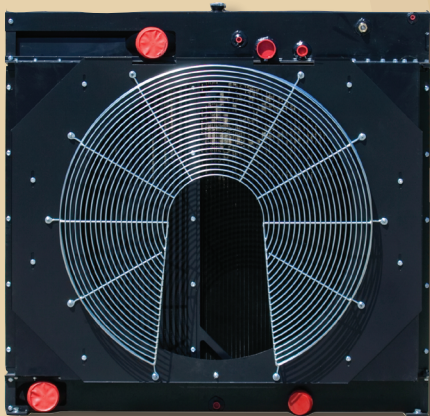

Our experienced team is here to professionally and effectively serve your heat transfer requirements. Need industrial radiators that withstand the toughest conditions and can usually be delivered in two weeks? TSM is your answer. Our durable custom-built and replacement units feature:

- All metal construction, with copper and brass cores.
- Powder coated heavy gauge steel and corrosion-resistant tanks.
- Galvanizing and solder coating on request.
- A rigorous quality control process which includes a state-of-the-art leak detection inspection.
- Complete radiators or components such as fans, fan guards and shrouds available separately.
- Easy, drop-in fit.
- Fastest shipping/delivery in the industry.

For more information about Gen Set Radiators, call 800-776-9605 or check www.thermalsolutionsmfg.com.
